

Cenozoic mammals and the biology of extinction

Peter D Smits

Committee on Evolutionary Biology, University of Chicago

June 4, 2014

All species that have ever lived are, to a first approximation, dead.

(Raup 1986 The Nemesis Affair)

Question

Why do certain taxa go extinct while others do not?

Modes of extinction

Field of Bullets – Wanton – Fair Game

(Raup 1991 Extinction: Bad Genes or Bad Luck?)

In context of this study

Rephrased

How does a taxon's **adaptive zone** affect **extinction risk**?

Van Valen's observation

Law of Constant Extinction

Extinction rate, in a given adaptive zone, is taxon-age independent.

(Van Valen 1973 *Evol. Theory*)

(Liow et al. 2011 *TREE*)

Formalization of Van Valen

Law of Constant Extinction

$$T \sim \text{Exp}(\lambda)$$

T : survival time

λ : expected number of
extinctions per unit time

Questions

- ▶ Do interactions involved in environmental preference predict differential survival?
 - ▶ Is survival best modeled by a single interactor or multiple interactors?
 - ▶ How do factors, such as climate, contribute?
- ▶ Is extinction taxon-age independent or dependent?
- ▶ Do genera and species have fundamentally different survival distributions?

Mammals

(Yale Peabody Museum)

Regions

North America:
2366 species, 1003 genera

Europe:
1767 species, 658 genera

Diet

carnivore, herbivore, omnivore, insectivore

herbivore > carnivore omnivore \simeq carnivore insectivore ?

ground dwelling, scansorial,
arboreal

- ▶ ground dwelling $>$ arboreal
- ▶ scansorial \simeq ground dwelling

Body size

↑ mass, ↑ range size, ↑ survival

OR

↑ mass, ↓ reproductive rate, ↓ survival

OR

no effect

NP regional survival curves

Model selection

Variable importance

Parameter interpretations

The Elephant in the Range

↑ occupancy, ↑ duration

Climate

(Strömberg *et al.* 2013 *Nature Com.*)

Future modeling work

currently $\hat{k} = c$, future $\hat{k} \approx$ CV climate and/or occupancy

generic level properties

- ▶ species:genus
- ▶ trait dispersion ($H(\text{diet})$, $\text{Var}(\text{mass})$, etc.)

CAR prior on frailty using phylogenetic distance/VCV matrix

incorporate duration uncertainty due to sampling
